PROFESSIONAL SUMMARY

Backend and Distributed Systems Engineer with hands-on experience designing scalable server architectures, decoupled microservices, and high-performance backend pipelines. Proven track record of implementing Domain-Driven Design (DDD), CQRS paradigms, and resilient messaging systems using NestJS, RabbitMQ, and PostgreSQL. Focused on writing optimized database queries, reducing coupling in core domains, and building clean, robust production infrastructure.

TECHNICAL SKILLS

- **Languages:** C++, TypeScript, JavaScript, Python, Java, SQL, C
- **Backend Frameworks:** NestJS, Node.js, Express, Django
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Architecture & Patterns:** Microservices, Domain-Driven Design (DDD), CQRS, Event-Driven Architecture (EDA), Event Sourcing, Inbox-Outbox Pattern
- **Libraries & Tools:** RabbitMQ, BullMQ, TypeORM, MikroORM, Docker, Socket.io, Git, Linux (CLI)

PROFESSIONAL EXPERIENCE

Zenmonk | Full Stack Developer | *Panipat, India* (Sept 2025 – Present)

- Architect modular monolith and microservices platforms using NestJS, decoupled domain logics, and clean architectures.
- Implement resilient asynchronous message pipelines and job processing systems utilizing RabbitMQ and BullMQ.
- Design and structure transactional entities, relationships, and queries using PostgreSQL with TypeORM and MikroORM.
- Apply Domain-Driven Design (DDD) and CQRS patterns to build maintainable, decoupled core application modules.
- Develop client-side dashboards and state management patterns using Next.js, Redux, and Material UI (MUI).

CodeQuotient | Software Engineer Intern | *Panipat, India* (May 2025 – Sept 2025)

- Developed an automated AI Resume Builder parsing engine powered by OpenAI and Google GenAI APIs, integrating strict JSON schema validation.
- Designed cryptographic hash verification pipelines for digital document signature integrity validation.
- Engineered high-performance asynchronous data scrapers utilizing queue management to parse and compile complex datasets.
- Optimized relational database routing and connection management policies inside MVC structures, improving query runtimes.

EDUCATION

Chandigarh University | Master of Computer Applications (MCA) | *Pursuing (2nd Year)*

Arya P.G. College, Panipat (Kurukshetra University) | Bachelor of Computer Applications (BCA) | 2021 – 2025 | **CGPA: 7.3**

Arya Sr. Sec. School, Panipat (HBSE Bhiwani) | Class 12 (Senior Secondary) | *HBSE Board*

Arya Sr. Sec. School, Panipat | Class 10 (High School)

KEY PROJECTS

Modular Monolith E-Commerce Backend | *NestJS, RabbitMQ, PostgreSQL, TypeORM, CQRS*

- Engineered a decoupled modular monolithic backend using NestJS to isolate critical e-commerce contexts (Orders, Catalog, Payments).
- Implemented separate, dedicated database connections/schemas per module using TypeORM to ensure strict data layer isolation and seamless future microservices migration.
- Developed sync and async inter-module workflows utilizing NestJS CQRS (Command Query Responsibility Segregation) event publishers and Socket.io streams.

RabbitMQ Event Broker Decoupling Pipeline | *Node.js, RabbitMQ, amqp-lib, Event-Driven Architecture*

- Designed an event distribution system utilizing amqp and robust pub/sub and task queuing routing models to decouple long-running processes.
- Built fault-tolerant messaging protocols featuring Dead Letter Exchanges (DLX), exponential backoff retries, and transactional Outbox patterns to ensure message delivery guarantees.

Digital Document Signature Service | *Node.js, MongoDB, Redis, Socket.io, Multer*

- Developed a document processing backend utilizing SHA-256 cryptographic hashes to validate file signature constraints and prevent tampering.
- Integrated Redis task-scheduling queues with BullMQ to manage asynchronous email delivery status updates, combined with Socket.io real-time streaming notifications.

AI Resume Builder & Profile Parser | *Google GenAI, OpenAI, Node.js, Redis, BullMQ, Express*

- Created an AI-driven parser transforming unstructured text developer data into validated, structured JSON formats using LLMs.
- Configured BullMQ job queues to handle CPU-intensive tasks such as template compilation, image rendering, and document compilation in background workers.

ACHIEVEMENTS & ACTIVITIES

- Ranked 2nd Place in On-Spot Programming/Coding, Zerone IT Fest (Arya PG College).
- Ranked 4th Place in Bug Hunt, Zerone IT Fest.
- Served as a National Cadet Corps (NCC) Cadet (School) and National Service Scheme (NSS) Volunteer (College).
